Model details

What type of model is it?

Metrics

What model performance measures are used to determine potential real-world impact?

Intended use

What is the primary intended use case of the model?
Who is the primary intended user of the model?
What uses are out-of-scope for the model?

Ethical considerations

Does the model use sensitive data?
Will the model inform decisions about matters central to human life or flourishing?
What risk mitigation strategies are used?
Are any intended or unintended use cases particularly dangerous?

Factors

What factors impact model performance?
Factors could include demographic or phenotypic groups, environmental conditions, technical attributes, or others.

Caveats and recommendations

Any other concerns that have not been covered in the previous sections?
